8. Title of Change: JRE (Java Run-time Environment) 1.1.5 COTS removal from systems at GSFC and NSIDC, and removal of JRE 1.1.7B from GSFC, LaRC, and NSIDC baseline documents.

24. Description of Change: (use additional Sheets if necessary) Original installation of JRE 1.1.5 was installed at EDC, GSFC and NSIDC. In fact, EDC is the only DAAC that requires this COTS package. GSFC and NSIDC should remove this JRE 1.1.5 COTS package from their systems. Further, the most recent version of JRE (1.1.7B) was released via PSR to EDC ONLY, however, inadvertently, the COTS baseline documentation Hw/SW maps for GSFC, LaRC, and NSIDC show JRE 1.1.7B as part of their baselines. This version does not physically exist on GSFC, LaRC, or NSIDC machines, and so the baseline documentation for these sites must remove this version.						
25. Proposed Solution: (use additional sheets if necessary) Item 1.) GSFC and NSIDC should remove JRE 1.1.5 from their g0ins01, g0ins02 and n0ins01, n0ins02 machines (LaRC does not have this software installed). Item 2.) The Hw/Sw map baselines for GSFC, LaRC, and NSIDC should have JRE 1.1.7B removed from the x0insxx machines.						
26. Alternate Solution: (use additional sheets if necessary) N/A						
27. Consequences if Change(s) are not approved: (use additional sheets if necessary) DAAC's will not be in compliance with the baseline. Furthermore, these DAAC's are not using the Java DAR Tool which was the only reason this COTS was required at EDC.						
28. Justification for Emergency (If Block 15 is "Emergency"):
